The invention relates to a human G-protein, termed 47124 and nucleic acid encoding it. 4734 is useful for treating cancer or aberrant cellular proliferation and/or differentiation such as breast, ovarian, prostate, colon and lung cancer, pain, heart disorders and viral disease. 47324 associate a lipid bilayer due to post-translational modifications, modulate signal transduction, control cell morphology and differentiation, mediate cellular trafficking and active cytoskeleton cramalisation. Cardiovascular disorders include hypertension and lateration. Cardiovascular disorders include hypertension and attention attention at the cost lateration and active cytoskeleton storage disease; metabolic disorders include obseity and anorexia; brain storage disease; metabolic disorders include befect; infections include acute meningitis and multiple solerosis; degenerative diseases include acute meningitis and multiple solerosis; degenerative diseases include laterations disorders include. responses of vascular cell walls to injury; has menatopoletic disorders include autoimmune disease such as diabetes mellitus and rheumatoid arthritis; bone disorders include acteoporesis; mellitus and rheumatoid arthritis; bone disorders include selectorals. A human G protein and nucleic acid molecule encoding it, for diagnosing and treating cellular proliferative, bone, immune, cardiovascular, liver, pain or metabolic disorders and identifying modulators. Claim 1; Fig 1; 118pp; English. WPI; 2002-315535/35. P-PSDB; AAE21568

useful in gene therapy. The present sequence is human 47324 cDNA

hormonal disorders include reproductive or fertility disorders. Ras family-associated or related disorders also include immune disorders such as autoimmune disorders or immune deficiency disorders e.g. severe combined immunodeficiency, 47324 is also useful as pharmacogenomic markers. 47324 is useful for producing non-human transgenic animals which are useful for studying the function and/or activity of 47324 and for identifying and/or evaluating modulators of 47324 activity, 47324 gene is

Human cDNA #467 differentially expressed in activated vascular tissue.

Human; gene; 88; vascular tissue; cytostatic; atherosclerosis; cardiant; hypotensive; antidiabetic; gynaecological; vasotropic; cerebroprotective; gene therapy; vascular disease; cancer; coronary; artery disease; hypertension; diabetes; pre-eclampsia; restenosis; ischaemia-reperfusion injury; stroke.

Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several CDNAs that are differentially expressed in activated vascular tissue.

This invention relates to a combination comprising several CDNAs that are discloses a high throughput method for detecting differentially expressed confiscions as any between the cDNAs of the invention may have antiateriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic; cytostatic; vasotropic and cerebroprotective activities and may be used in gene therapy. The cDNAs of the invention may be used in a high-throughput methods for detecting differential expression of one or more convertive a mample, or screening several molecules or compounds to identify a molecule or compound that specifically binds a cDNA of the invention. A protein encoded by the cDNA may be used to screen several molecules or compounds to identify a ligand that specifically binds to the protein that can combinant protein in a sample. The nucleotides may be useful for recombinant protein from a sample. The nucleotides may be useful for recombinant protein from a sample. The nucleotides may be useful for disease, hypertension, diabetes, pre-eclampsia, ischaemia reperfusion of a vascular disease, ce g. atherosclerosis, cancer, coronary artery disease, hypertension, diabetes, pre-eclampsia, ischaemia reperfusion control or gene expression analysis of several new nucleic acid collapsions pre-pathologic disorders, and chronic or acute diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel (NOVX) human polypeptide. A polypeptide of the invention has cardiant, antiarteriosclerotic, hypotensive, immunosuppressive, dermatological, anorectic, cytostatic, antidiabetic, hemostetic, anti-HIV, antiasthmatic, antibacterial, virucide, neuroprotective, noctropic, antiparkinsonian, and antilipaemic activity. A polymclectide encoding a polypeptide of the invention may have a use in gene therapy, and as a vaccine. A polypeptide of the invention is useful in the manufacture of a medicament for treating a syndrome associated with a human disease, the disease selected from a pathology associated with the polypeptide. These may also be used in diagnosing, treating or preventing NOVX-associated disorders such as cardiomyopathy, attentosclerosis, hypertension, scleroderma, obesity, cancer, diabetes, hemosphila, graft-versus-host disease, AIDS, asthma, Crohm's disease, neurodegenerative disorders (e.g. Alzheimer's disease or Parkinson's disease), hematopoietic disorders, dyshimer's disease or Parkinson's disease), hematopoietic disorders, dyshimer's disease or parkinson's disease), hematopoietic disorders, dispidaemias and other wasting disorders associated with chronic diseases. The nucleic acids are also between the analysis and pharmacogenomics. The polypeptides are also useful as vaccines. The present sequence encodes a NOVX polypeptide of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô

This invention relates to a novel isolated NOVX polypeptide comprising a fully defined sequence of, a mature form, one or more conservative substitutions or at least 95% identity to 247 amino acids as given in the specification. The invention may be useful for the development of compounds with a cytostatic, antidiabetic, anorectic, cerebroprotective, neuroprotective, antiinflammatory, thyromimetic or cardiant activity. In addition, the disclosed sequences may be useful for the diagnosis and treatment of disorders associated with aberrant expression or activity of the NOYX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS, cardiovascular and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. The present sequence is that of a gene which encodes a human NOVX protein of the invention.
                                  New isolated NOVX polypeptides and nucleic acid molecules useful for treating, preventing and diagnosing pathological conditions with NOVX-associated disorders, such as cancer, obesity, diabetes and inflammatory or CNS diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AGGTTTTTTGATAAGGTCATAGAGAAGAGATACTTTTTAAGAGAAGGTAATCAGATTCCA

The invention relates to a novel (NOVX) human polypeptide. A polypeptide of the invention has cardiant, antiarteriosclerotic, hypotensive, immunosuppressive, dermatological, anorectic, cytostatic, antidiabetic, haemostatic, anti-HIV, antiasthmatic, antibacterial, virucide, neuroprotective, nootropic, antiparkinsonian, and antilipaemic activity.

A polynucleotide encoding a polypeptide of the invention may have a use in gene therapy, and as a vaccine. A polypeptide of the invention is useful in the manufacture of a medicament for treating a syndrome associated with the polypeptide. These may also be used in diagnosing, treating or preventing NOVX-associated disorders such as cardiomyopathy, atherosclerosis, hypertension, scleroderma, obesity, cancer, diabetes, haemophilia, graft-versus-host disease, AIDS, asthma, Crohn's disease, neurodegenerative disorders (e.g. Altheimer's disease or Parkinson's disease), haematopoietic disorders, dyslipidaemias and other wasting cused as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypeptides are also used as hybridisation probes, in chromosome mapping, tissue typing, useful as vaccines. The present sequence encodes a NOVX polypeptide of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  309
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           480
                New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, diabetes, asthma or AIDS, and in chromosome mapping, tissue typing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             429
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  489

New isolated NOVX polypeptides and nucleic acid molecules useful for treating, preventing and diagnosing pathological conditions with NOVX-associated disorders, such as cancer, obesity, diabetes and inflammatory or CNS diseases.

Claim 20; SEQ ID NO 127; 250pp; English.

This invention relates to a novel isolated NOVX polypeptide comprising a fully defined sequence of, a mature form, one or more conservative substitutions or at least 15% identity to 247 amino acids as given in the specification. The invention may be useful for the development of compounds with a cytostatic, antidiabetic, anorectic, cerebroprotective, neutroprotective, antidiabetic, anorectic, cerebroprotective, andidition, the disclosed sequences may prove useful for gene-therapy or antisense-therapy. The invention may be useful for the diagnosis and treatment of disorders associated with aberrant expression or activity of the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS, cardiovascular and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. The present sequence is that of a gene which encodes a human NOVX protein of the invention.

The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the polypeptide is also useful for identifying a binding partner to the polypeptide is useful for identifying a binding partner and determining Whether the binding partner ceffects an activity of the polypeptide. The polypeptide or the mucleic acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administraing the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid is useful for diagnosing a pathological condition or a susceptibility to a pathological condition or a susceptibility to a pathological condition or susceptibility to a pathological condition and an an antibody to the polypeptide are useful as immunosuppressive agence or absence of the mucleic acid and the antibody are useful as immunosuppressive agence or a susceptibility thrombocytopenia. The polypeptide or a susceptibility thrombocytopenia and increase serum immunosuppressive agents to induce thigher a present sequ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 959 BP; 260 A; 200 C; 249 G; 247 T; 0 U; 3 Other;

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences corresponding to are useful in diagnostics as expressed sequence tags (EST) for information, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide responsible for genetic disorders and other traits. The nucleotide for correcting antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                  New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          276
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    319
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             336

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human secreted proteins, and encode the proteins given in AAX12261 to human secreted proteins, and encode the proteins given in AAX12261 to AAX12514, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted brotein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, hemotopiesis regulating activity, tissue growth regulating activity, reproductive hormone activity, tumour inhibition activity or other activity, anti-inflammatory activity, tumour inhibition activity or other activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide into a membrane, or importing a polypeptide into a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acids encoding human secreted proteins - obtained from cDNA libraries prepared from e.g. liver, ovary, brain, prostate, kidney, lung, umbilical cord, placenta and colon tissue.
                                                                                                                                                                                                                                                          Human; secreted protein; EST; expressed sequence tag; diagnosis; forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopoiesis regulation; tissue growth regulation; reproductive hormone regulation; chemocactic; chemokinetic; haemostatic; thrombolytic; anti-inflammatory; tumour inhibition; ds.

The present sequence is one of a large number of 5' ESTB derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTB were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. ESTS sequences usually correspond mainly to the 3' untranslated region (UTR) of the MRNA because they are often obtained from oligo-dry primed cDNA libraries. Such ESTB are not well suited for isolating cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTB are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTB are also used in diagnostic, formatic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                          sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnostic, forensic, gene therapy and chromosome mapping procedures

cattle, and the LWFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 5912 nucleotide sequences, appearing as ABX50072-ABX55933, or complements of them. Also included are: (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or issue, where hybridisation between the marker nucleic acid (comprising any of the 5912 nucleic acid molecule obtained from the bovine cell or camplementary nucleic acid molecule obtained from the bovine of the complementary nucleic acid sequence of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the complementary nucleic acid is practicity of the detection of the molecule. The LMFD nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapphing, gene identification and analysis, castle breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the 5912 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in cattle format from the USPDO well sequence is one of the 5912 sequence than 12Doc1D=20020137160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        998 AGTAAATGAGCAATGACAGTGTACTGCAGAGAAAATTTACTCTTGCCTAGAACTGGAGGG 1057

                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcribtome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several coligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The coligonucleotide libraries are useful for detecting muNAs from a biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal contrained to detect transcripts of a sub-transcriptome under a particular libraries to detect transcripts of a sub-transcriptome under a particular collibraries to detect transcripts of a sub-transcriptome under a particular collogical or pathological state, and so allowing the detection of tissue and pathology-specific genes such as those genes only expressed in compensation to a specific pathological condition; to detect condition; to detect condition; to detect condition; to detect condition to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular condition and mice, which are used in the exemplification of the present invention. N.B. The sequence data for this patent did not form particular than the pathology pathology format pathology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        selectively hybridize to mRNAs transcribed from a transcription unit of a genome, useful for detecting tissue-, pathology-, and developmental-
